## Purpose:

This document highlights the findings from tests conducted on the "Domino's Pizza" website, specifically identifying bugs within key functions such as signing in/up, site navigation, menu exploration, utilizing various features, locating restaurant information, and notably, the process of ordering food.

## Application Overview:

The "Domino's Pizza" website revolves around its dual role as a web and mobile platform. It is designed to exhibit the chain's menu offerings and facilitates users in placing orders for either delivery or self-pickup directly from the displayed menu options.

# Type of Testing:

In this testing, I've covered a comprehensive set of testing methodologies, addressing both functional and non-functional aspects of the website.

Here's a breakdown of the testing types conducted:

1. **Usability Testing:**

   Assessing the website's user-friendliness and how easily users can navigate and interact with it.

2. **Accessibility Testing:**

   Ensuring that the website is accessible to users with disabilities and complies with relevant accessibility standards.

3. **Security Testing:**

   Identifying and mitigating potential security vulnerabilities to protect user data and maintain the integrity of the system.

4. **GUI Testing:**

   Verifying the graphical user interface elements, such as buttons, menus, and navigation, to ensure they function as intended.

5. **Compatibility Testing:**

   Testing the website's compatibility across different browsers, devices, and operating systems to ensure a consistent user experience.

6. **Sanity Testing:**

   Conducting quick tests to verify that specific functionalities work.

7. **Performance Testing:**

   Evaluating the website's speed, responsiveness, and overall performance under various conditions to ensure optimal user experience.

8. **Interface Testing:**

   Verifying the interactions between different software components or modules to ensure seamless integration.

9. **Exploratory Testing:**

   Unscripted testing where testers explore the application, learning about it on the fly, and identifying issues as they go.

10. **Survival & Recovery Testing:**

    Testing the system's ability to recover from failures or disruptions and ensure its continued operation.

# Recommendation:

Enhance the entire website by implementing the following improvements:

1. **Background Design:**
    - Ensure that the background design across the entire site enhances overall aesthetics without distracting from the main content. It should seamlessly complement the user experience.
2. **Loading Time Optimization:**
    - Optimize images and multimedia elements throughout the site to significantly reduce page loading times.
    - Minimize unnecessary scripts and plugins on all pages to ensure consistently fast loading times.
3. **Language Options:**
    - Introduce an option for users to easily switch the website language to English or other preferred languages. Providing language flexibility enhances accessibility for a broader audience.
4. **User Feedback:**
    - Proactively gather feedback from users on various aspects of the website, including navigation, content presentation, and overall user experience.
    - Use the feedback received to identify specific areas for improvement and refine the user interface and functionality across the entire site.

Implementing these enhancements globally throughout the website will contribute to a more visually appealing, user-friendly, and efficient user experience, catering to a diverse audience and improving overall satisfaction across all pages.

# Conclusion:

After conducting a test on the 'Domino's Pizza' website, I found several bugs, primarily related to GUI testing, with severity levels ranging from low to major. Although these issues aren't highly severe, I believe they might pose challenges for users when performing simple tasks, such as ordering pizza. Nevertheless, the website still functions well, achieving its main objectives—allowing users to effortlessly view the menu and place orders for home delivery or self-collection. Therefore, I recommend proceeding with the release of the site.

2. Click on 'סדנאות שף צעיר' at the top of the page.
3. Click on the 'לפרטים והרשמה' (For details and registration) button

4. Fill in the fields

**Actual Result:**

The workshop invitation has been approved with incorrect details

The absence of any notice regarding these errors prevents user from realizing the inaccuracies, and the inability to correct the details hinders any attempts to reach them back

**Expected Result:**

A notice will be included, and restrictions, such as allowing only numbers for the phone field, will be implemented to ensure accurate and valid contact details

| **Severity:** | S4 Minor |

Description

**Steps To Reproduce:**

Scroll to the bottom of the homepage and click on the 'צביקה לרמן- אחראי נגישות' button

**Actual Result:**

Clicking on the 'צביקה לרמן- אחראי נגישות' link results in inconsistent redirects. One click redirect leads to the delivery page (incorrect direction), and the second click redirect leads to a page for sending a message about accessibility (correct direction), and so on.

This inconsistency may cause confusion and lead users in the wrong direction when trying to engage with the content

**Expected Result:**

Clicking on the 'צביקה לרמן- אחראי נגישות' link should consistently redirect users to the page for sending a message about accessibility, providing the intended and relevant information
